

MARVIN WANDATI

DEVOPS / SITE RELIABILITY ENGINEER | AWS | KUBERNETES | TERRAFORM | PYTHON | PRODUCTION RELIABILITY

Milan, Italy | +39 351 368 8796 | wandatimarvin23@gmail.com | github.com/Wandati

PROFILE

DevOps / Site Reliability Engineer operating an AWS-native B2B SaaS platform as its sole infrastructure owner. Hands-on experience across AWS, Terraform, Kubernetes, Python and Bash automation, production observability, incident first response, infrastructure security, networking, and cost and capacity optimisation. Manage three Terraform-controlled environments and the development-to-production release path for 10+ applications. Delivered measurable outcomes including \$15.6K+ annual RDS savings, 80% lower search latency, 30% lower compute cost, and a reduction in container findings from 1,014 to 9. Work independently and with software engineers; available for weekly on-call rotation.

TECHNICAL SKILLS

Cloud Infrastructure: AWS: App Runner, ECS/Fargate, API Gateway, S3, CloudFront, ECR, RDS, Route 53, OpenSearch, CloudWatch, IAM, KMS, Athena; Azure fundamentals

Infrastructure as Code and Configuration: Terraform modules, remote state and locking, tfint, CI policy enforcement; CloudFormation; Ansible

Containers and Orchestration: Docker; Kubernetes including EKS and self-managed clusters; Helm; Istio with mTLS and canary delivery; Longhorn; Kasten K10; CAST AI

Reliability and Incident Operations: Production telemetry, service health and p95/p99 latency monitoring, alerting, incident first response, runbooks, deployment and rollback guides, recovery procedures; Prometheus, Grafana/Grafana Cloud, CloudWatch, X-Ray, ELK, OpenObserve, ElastAlert to Slack

Networking and DNS: Route 53, VPC peering, controlled routing, security groups, private VPC access, CloudFront, API Gateway, IAM and KMS

CI/CD and GitOps: GitHub Actions with multi-environment promotion, tag gates, approvals and OIDC federation; Jenkins; GitLab CI/CD; Argo CD

Security and Software Supply Chain: Trivy, CodeQL, Gitleaks, Cosign signing, CycloneDX SBOM, OPA/Kyverno, Vault, least-privilege IAM, vulnerability remediation and container hardening

Programming and Systems: Python and Bash automation/scripting; Linux: Ubuntu and CentOS/RHEL; Git and GitHub; systemd timers

Data Platforms: PostgreSQL and Amazon RDS provisioning, gp3 optimisation, snapshots and backups; OpenSearch

PROFESSIONAL EXPERIENCE

DevSecOps / Site Reliability Engineer - Expandi Limited / Expandi Agency SRL | February 2026 - Present

Milan, Italy | B2B SaaS | Sole DevSecOps/SRE engineer | AWS-native platform | 10+ applications across development, staging and production

- Built and operate modular Terraform infrastructure for **10+ applications across three AWS environments** using App Runner, API Gateway, CloudFront/S3, ECR, RDS, Route 53 and IAM; completed the GoDaddy-to-Route 53 migration with **zero downtime**.
- Re-engineered GitHub Actions delivery from development to staging to production using tag gates, approvals, SAST, secret scanning, dependency and image scanning, SBOM generation, artifact signing and AWS OIDC; reduced deployment time from **30 minutes to under 10**, blocked **four HIGH vulnerabilities**, and removed long-lived AWS deployment credentials.
- Established production telemetry across application, infrastructure, JVM, database, queue and WAF layers with OpenObserve, Grafana Cloud, CloudWatch and X-Ray; implemented **p95/p99 latency and health alerting** with runbooks to accelerate **first-line incident response**.
- Rebuilt a core container using multi-stage builds, a distroless runtime image and SHA-pinned base images; reduced findings from **1,014 to 9** (Critical 25 to 0, High 284 to 7) and image size from more than 2.5 GB to **under 200 MB**.
- Executed a blue-green migration of a **13.2 TB PostgreSQL RDS** database whose storage could not be reduced in place; restored it onto right-sized gp3 storage, validated the green environment, shifted application traffic and eliminated **\$15.6K+ in annual infrastructure waste**.
- Designed a private Terraform-managed OpenSearch platform for 3.22M company documents (78.3M Lucene documents), **reducing search latency by 80%**; secured it with KMS encryption, least-privilege IAM, logging, health alarms and **VPC-only access** through controlled VPC peering, routing and security groups.
- Built scheduled EC2 cost-control automation with Bash and systemd timers for guarded overnight shutdowns and CloudFormation-managed EventBridge schedules for weekday startup, **reducing compute cost by 30%** while preserving working-hours availability.
- Created and maintained operational documentation across **5+ projects**, including architecture diagrams, Terraform procedures, ADRs, deployment and rollback guides, incident runbooks and recovery procedures.

DevOps / Site Reliability Engineer - Ryanada Limited | February 2025 - August 2025

Remote | Cloud hosting, domains and VPS | 100+ servers | Two Kubernetes clusters | Observability and recovery

- Standardised configuration across **100+ VPS hosting servers** with reusable Ansible playbooks, replacing hours-long manual setup with repeatable provisioning and reducing configuration drift.
- Centralised VPS and customer-facing service logs in the ELK stack and routed ElastAlert notifications to Slack for host and HTTP availability failures, **CPU above 95%**, and **latency above 3 seconds**; combined these signals with Playwright synthetic journeys to detect and mitigate failures before they became customer-support calls.
- Protected stateful workloads across **two Kubernetes clusters** using Longhorn persistent storage and snapshots with scheduled Kasten K10 backups to MinIO S3, providing documented recovery paths for node and workload failures.
- Ran **Prometheus and Grafana in high availability** and automated S3-to-Glacier log retention, preserving operational visibility while moving older logs to a lower-cost storage tier.
- Used workload-utilisation data, right-sizing and **CAST AI predictive scaling** across two Kubernetes clusters to reduce idle capacity without weakening application availability.

CERTIFICATIONS AND TRAINING

KodeKloud DevOps Engineer Track (10 courses) | AWS Educate Cloud (8 modules) | Certified DevOps Practitioner - Docker and Kubernetes | DevOps Bootcamp, TechWorld with Nana (2024)

EDUCATION

BSc Information Technology - Jomo Kenyatta University of Agriculture and Technology (JKUAT), Second Class Upper Division | 2020 - 2022

Software Engineering - Moringa School | 2023

ADDITIONAL INFORMATION

Languages: English (native), Italian (professional), Spanish (intermediate)

Work authorisation: Authorised to work in Italy

Availability: Open to hybrid work, remote work and a weekly on-call rotation
